Application for AI & Context Engineer (m/f/d) FP&A

Dear Hiring Team,

I am writing to apply for the AI & Context Engineer (m/f/d) FP&A position at Siemens Energy. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently an agentic system that turns complex documents into structured, queryable knowledge for the German energy sector.

That system is close to the context layer you describe. At Kniit I was the sole developer of the knowledge-extraction pipeline, working with SAP domain experts who were not engineers. I designed multi-agent extraction with LangGraph and raised precision and recall from 33% and 45% to 93% and 90% against ground truth from the customer's SAP system. I also built an MCP query service that exposes the knowledge graph with millisecond latency to AI tools, including Claude Code, and an Expert Interface in React and Python on Azure where experts approve changes before they go live.

Retrieval quality is something I have measured, not just built. My Master's thesis at Covestro covered RAG evaluation with RAGAS and PytrecEval, chunking strategies and embedding benchmarks on over one million chunks. As an AI consulting intern there I sat with business stakeholders, learned how they made decisions and built an agentic application with LangGraph, FastAPI and React. I containerized it with Docker and deployed it to AWS with CDK and GitLab CI/CD.

I have not worked with Snowflake, Semantic Kernel or Copilot Studio, and I have not used Azure AI Foundry or Amazon Bedrock. My cloud work is on Azure and AWS directly, my SQL and data modelling come from Postgres and Neo4j, and I use agentic coding tools every day. I would pick up the Snowflake and Microsoft tooling quickly. I also care about permissions and traceability: in the Expert Interface, nothing reaches the knowledge graph without a human approval.

Making FP&A knowledge machine-readable for every AI tool, and building the agents that run its processes, is a concrete problem with many users. Working between the finance teams and the platforms their agents run on suits how I have worked so far, between domain experts and engineering. I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
