Application for ML Engineer in NLP

Dear Hiring Team,

I am writing to apply for the ML Engineer in NLP position at voize. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently LLM agent pipelines that I owned from ingestion to production.

At Kniit I was the sole developer of a multi-agent extraction system (LangGraph) for regulatory and technical documents in the German energy sector. I measured it against a ground truth derived from an SAP system and used error analysis to move precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced LLM calls with a deterministic pipeline and cut a projected $200,000 LLM budget to near-zero running cost. That is the kind of cost and quality trade-off I want to keep making. I also built an MCP tool service that gives agents millisecond-latency access to the knowledge graph.

My thesis at Covestro was an automated evaluation of RAG systems with RAGAS and PytrecEval against chemist-provided ground truth, plus a benchmark of multilingual embedding models on more than one million chunks. Earlier at Covestro I trained and compared Random Forest, XGBoost and LSTM models, and I have fine-tuned open-source LLMs with QLoRA. So I am used to deciding when a trained model is the right tool and explaining why.

On the engineering side I write Python services with FastAPI, containerise them with Docker and ship them through CI/CD on AWS and Azure. At Kniit I worked with CTO and domain experts directly, and at Covestro I translated stakeholder workflows into an agentic solution, which is close to working with care professionals and product teams.

voize caught my attention because the product removes paperwork for people who have little time, and the November 2025 Series A shows the agent stack is about to grow. Owning evaluation and privacy-sensitive model work in a young stack is the work I want.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
