Application for Consultant Data Science (m/f/d)

Dear Hiring Team,

I am writing to apply for the Consultant Data Science position at R+V Re. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on generative AI, agent systems and classical machine learning.

At Kniit I was the sole developer of an agentic knowledge-extraction system for the German energy sector. I built multi-agent pipelines in LangGraph for complex regulatory documents and raised precision and recall from 33% and 45% to 93% and 90% against a ground truth taken from the customer's SAP system. I worked closely with domain experts there, and I would approach reinsurance use cases the same way: sit down with the underwriters, understand the process first, then decide where AI helps.

At Covestro I worked on both sides of the field. For my thesis I built RAG evaluation with RAGAS on over a million chunks of internal data. As an AI consulting intern I advised business stakeholders on how an agentic workflow could support their decisions and then built and deployed it. Earlier, as a data scientist, I compared Random Forest, XGBoost and LSTM models on process time series, so classical machine learning is not new to me.

On the engineering side I write Python every day, use GitLab with CI/CD, and have deployed to Azure (Expert Interface at Kniit, Kubernetes and Docker) and to AWS with CDK. I also use Claude Code and agentic coding workflows in daily development. I know Agile from my teams, but I have not yet worked in SAFe or an insurance setting, and I would learn both quickly.

R+V Re stands out to me because it is a global non-life reinsurer that still works on cooperative principles, and because it puts AI directly into the active reinsurance business instead of a side lab.

I am based in Wiesbaden, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
