Application for Expert Data Scientist - Customer & Decision Intelligence (m/f/d)

Dear Hiring Team,

I am writing to apply for the Expert Data Scientist - Customer & Decision Intelligence position at MediaMarktSaturn. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a data science core of forecasting, model comparison and validation against a baseline.

My most relevant modelling work is from Covestro, where I predicted prepolymer synthesis outcomes from sensor time series. I built Random Forest, XGBoost and LSTM models, engineered lag and rolling-window features, and benchmarked all of them against the empirical curve-fitting the chemists used before. I then put the predictions into a Streamlit dashboard so they could simulate parameter changes before running a physical batch. At Cognizant I compared ARIMA, SARIMA, XGBoost, Prophet and an LSTM for EV load forecasting. Comparing against a simple baseline before reaching for anything heavier is how I approach this work, and it matches how your team describes its philosophy.

At Kniit I was the sole developer of a multi-agent extraction pipeline for the German energy sector. I measured it against ground truth built from the customer's SAP system and raised precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM calls with a deterministic pipeline, which cut a projected $200,000 LLM budget to near zero. That experience is why I am careful about when an LLM adds value and when it does not. In my Master's thesis at Covestro I evaluated RAG systems with RAGAS and PytrecEval, so I am used to explaining results to non-technical stakeholders.

Your posting names mathematical optimization, causal inference and experimentation. Those are areas where I have less production experience than in forecasting and GenAI, and I would build on my statistics and SciPy background there. I have not worked on Google Cloud yet, but I have shipped on AWS and Azure and would pick up BigQuery and Vertex AI quickly.

MediaMarktSaturn caught my attention because the Decision Science team is organised around two clear pillars, operations and customer intelligence, and is asked to justify each model choice with evidence. I would like to work in a team that values that.

I am based in Ingolstadt. I hold an EU Blue Card and could start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
