Application for AI Software Engineer WMS (m/w/d)

Dear Hiring Team,

I am writing to apply for the AI Software Engineer WMS position at pyck. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic LLM system, and I work with AI coding tools every day.

At Kniit I did my development with Claude Code, custom skills and agentic coding workflows, and I built an MCP query service that exposes a knowledge graph through an API and plugs into Claude Code. So the AI-assisted development you ask for is how I already work. The service also taught me to keep integrations simple: a clear interface, fast responses and predictable behaviour for whoever calls it.

Your role starts with understanding what a customer needs and checking whether it can be built. At Kniit I was the technical contact for SAP domain experts in the German energy sector, and at Covestro, as an AI consulting intern, I sat with business stakeholders, learned how they made decisions and turned that into a working agentic application. I enjoy this part of the work, including the follow-up when something does not behave as expected. For the Kniit pipeline I measured results against ground truth from the customer's SAP system, and moved precision and recall from 33% and 45% to 93% and 90%.

On the technical side, I write Python and build APIs with FastAPI, and I built the Expert Interface at Kniit, a React frontend with Python microservices on Azure. At Covestro I containerized a React and FastAPI application with Docker and deployed it to AWS with CDK and GitLab CI/CD. I have not worked with Go, GraphQL, Temporal, NATS or Flutter yet. I have worked with REST APIs and event-style AWS services such as SQS and Lambda, and I am comfortable picking up a new stack quickly. I have not yet integrated ERP, EDI or carrier systems in a customer project either, and warehouse software would be new ground for me.

What draws me to pyck is the idea of building warehouse software from a toolkit with AI instead of a heavy standard product, with the people who implement it also shaping the product. A remote-first team that works this closely with customers is the setting I want to grow in. I live in Germany, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent and my German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
