Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at Truvio. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agentic systems that work on messy enterprise data and keep a human in the loop.

At Kniit I was the sole developer of a multi-agent extraction pipeline (LangGraph) for the German energy sector. I worked with SAP domain experts to build the ground truth from their system, and I used it to push precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM calls with a deterministic pipeline, which cut a projected $200,000 LLM budget to near zero. I also built a web app where domain experts review and approve changes before they go in, and an MCP service that exposes the data to agents as tools.

Before that, at Covestro, I built an agentic application with LangGraph, a FastAPI backend and a React front end, after talking to the business stakeholders about how they make decisions today. My Master's thesis there was about evaluating RAG systems with RAGAS and PytrecEval against chemist-provided ground truth, which is why I do not ship on vibes either. I also fine-tuned open-source LLMs with QLoRA, which I would be glad to apply to cost and latency questions.

Truvio's role caught my attention because the agents act on finance data inside Dynamics 365 and the feature is owned from the workflow to production. I have not worked with Dynamics 365 or in accounts payable yet, but I have worked closely with SAP experts and enjoy learning a domain properly.

I am based in Germany and can work remotely across Europe. I hold an EU Blue Card and could start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
