Application for Forward Deployed Engineer (f/m/d)

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position at VoiceLine. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system for the German energy sector, where I worked directly with the people who use it.

At Kniit I owned a knowledge-extraction pipeline from ingestion to indexing and built the pieces around it: a Python microservices backend, a React app on Azure that lets SAP domain experts approve changes, and an MCP query service that exposes the knowledge graph through an API. I ran it with Docker and Kubernetes. Those experts were my customers. I sat with them, learned how they work, and changed the system until it fit.

At Covestro I did the same from the consulting side. As an AI Consulting Intern I talked to business stakeholders about their decision-making workflows, advised on where agentic AI could help, and built it: a FastAPI backend and React front end, tested with Postman, containerised with Docker and deployed on AWS with CDK through GitLab CI/CD. I have not yet built CRM integrations with Salesforce or Dynamics, nor handled security questionnaires, SAML or DPIAs, so those are the areas I would learn first.

VoiceLine interests me because you turn spoken field conversations into structured data inside enterprise CRMs, and the Series A earlier this year means the integrations will grow quickly. A Forward Deployed Engineer who both builds and runs them is where I want to work.

I am based in Munich, hold an EU Blue Card, speak German at B1 alongside fluent English, and can start on 15 November 2026. I am happy to travel to customer sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
