Application for Forward Deployed Engineer – North America

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position for North America at carbmee. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it turning data that sits in different systems and formats into one model that people can make decisions with.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector, reporting to the CTO and working with SAP domain experts. Four LangGraph agents turn unstructured regulatory and technical documents into a knowledge graph. I measured the output against a ground truth derived from SAP systems, and precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume source I built a deterministic, code-based pipeline instead of model calls, which cut a projected $200,000 LLM budget to almost nothing. That trade-off between AI and plain rules is one I expect to make often when matching items to emission factors.

The customer-facing part I know from Covestro, where I worked as an AI consulting intern. I sat with business stakeholders, mapped how they made decisions, advised where agentic AI could help and then built the solution with a FastAPI backend and deployed it on AWS. At Kniit I built Expert Interface, a web app on Azure where domain experts approve changes to the data before they are applied, because the people who know the data have to trust the result.

My SAP exposure so far comes from the data side and from working with SAP experts rather than from ERP implementation, and I have not yet worked with North American customers. I am comfortable with SQL and data modeling, I learn a new landscape fast, and I am fully willing to travel to customers in the US and Canada as often as the work needs.

carbmee's step this year to position the EIS as an execution layer for procurement, compliance and forecasting is what makes this role interesting to me: the hard part is connecting the data at item level, and that is the work I enjoy most.

I will be based in Munich, can work from the office three days a week, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
