Application for AI Automation & Infrastructure Specialist (m/w/d)

Dear maorika team,

I am writing to apply for the AI Automation & Infrastructure Specialist position at maorika and nedura. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and Claude Code is the tool I build with.

At Kniit, an early-stage start-up, I am the only developer of a knowledge-extraction system for the German energy sector, reporting to the CTO. I built it with Claude Code, custom skills and agentic coding workflows. Four LangGraph agents extract knowledge from technical documents; measured against a ground truth from SAP data, precision and recall went from 33% and 45% to 93% and 90%. I also built a Model Context Protocol service so Claude Code can query our knowledge graph directly, and Expert Interface, an internal web app on Azure where domain experts approve changes.

Your question "can an agent do this?" has a second half: sometimes the answer is plain code. For one high-volume data stream I built deterministic code instead of LLM calls and cut a projected $200,000 LLM budget to almost nothing. Knowing when to prototype fast, when to clean up and when to skip the model is what keeps automations running while someone is on holiday.

I have not worked with Shopify, Amazon, Klaviyo, Gorgias or DATEV yet, and I have no e-commerce background. With your sales more than doubled in 2026, support volume grows faster than the team. The first process I would automate is customer service: an agent that reads incoming Gorgias tickets, looks up the order in Shopify, drafts the reply and lets a person approve it with one click.

I will be based in Hamburg, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level; my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
