Application for Machine Learning Engineer

Dear Hiring Team,

I am writing to apply for the Machine Learning Engineer position in STARK's Operations Excellence team. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part I enjoy most is ML on real process data that changes a decision on the shop floor.

At Covestro I predicted the outcome of prepolymer synthesis batches from sensor time series. I built lag features and rolling windows from temperature and process variables, compared Random Forest, XGBoost and an LSTM, and benchmarked them against the empirical curve-fitting the chemists used before. The models flagged batches likely to miss specification earlier, and a Streamlit dashboard let chemists try parameter changes before running a physical batch. That is close to yield prediction on your line. At Cognizant I built ARIMA, Prophet, XGBoost and LSTM models for EV load forecasting, where the LSTM reached 96% test accuracy.

For the past year at Kniit I have been the only developer of a production pipeline for the German energy sector, reporting to the CTO. It extracts knowledge from regulatory and technical documents; measured against a ground truth derived from SAP data, my multi-agent extraction raised precision and recall from 33% and 45% to 93% and 90%. Where a model was not needed I wrote deterministic code instead, cutting a projected $200,000 LLM budget to almost nothing. I deploy with Docker, Kubernetes, Azure and AWS CDK.

Your posting asks for four to seven years; I have three, including internships. In a job I have also not yet run a full MLOps cycle with model registry, drift detection and automated retraining, or used Airflow and dbt. Those are the parts I would build first with your OAA lead, on top of solid Python, SQL and scikit-learn.

STARK is scaling drone production fast, from the Bundeswehr contract to the new Swindon plant, and every point of yield on the line and every anomaly caught in the back office matters at that pace. I would like to help build the data and ML foundation for that.

I will be based in Munich, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
