Application for AI Platform Engineer (m/w/d)

Dear Hiring Team,

I am writing to apply for the AI Platform Engineer position at Zapp Precision Metals. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the past year I have been taking an agentic GenAI system from a first prototype to a deployed system.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector, reporting to the CTO. It runs four LangGraph agents in parallel on regulatory and technical documents. I evaluated the pipeline against a ground truth built from SAP data, which is how precision and recall went from 33% and 45% to 93% and 90%. Where an LLM was not needed, I replaced it with deterministic code and cut a projected $200,000 LLM budget to almost nothing.

Connecting systems is the other half of your posting. I built a Model Context Protocol service that gives AI agents access to our knowledge graph in milliseconds and plugs into Claude Code, and Expert Interface, a web app on Azure with a Python microservices backend where domain experts approve changes before they are applied. At Covestro I worked with business stakeholders on their decision workflows, built a LangGraph application with FastAPI REST APIs and deployed it with Docker, AWS CDK and GitLab CI/CD.

I have not yet owned identity management, permission models or an AI governance process together with IT security, and quality gates as a shared team standard are new to me as well. Those are the parts of the role I would most like to grow into, and I would start by agreeing on them with your IT and security colleagues before scaling the first use cases.

What draws me to Zapp is the chance to build the AI platform of an established, family-owned manufacturer early, where the data comes from real production and materials processes and the first use cases still shape the architecture.

I will be based in Schwerte, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and improving; my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
