Application for Business Automation Developer

Dear Hiring Team,

I am writing to apply for the Business Automation Developer position at flaconi. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of that work has been about taking a slow, manual task and turning it into something that runs on its own.

AI coding assistants are how I build. At Kniit, where I am the sole developer of a knowledge-extraction pipeline for the German energy sector, I build with Claude Code as my coding assistant, using custom skills and agentic coding workflows to generate, debug and test code. I also built an MCP query service that plugs our knowledge graph straight into Claude Code, so the assistant can look things up while it writes code.

The pipeline itself automates a multi-step job: reading complex regulatory and technical documents and pulling out what matters. I built multi-agent extraction with LangGraph and checked it against a ground truth from SAP system data; precision and recall rose from 33% and 45% to 93% and 90%. For a second, high-volume source I picked plain code over LLM calls, which cut a projected $200,000 LLM budget to near-zero recurring cost. Choosing the simplest tool that does the job is a habit I would bring to your team.

The process side matters as much as the code. As an AI consulting intern at Covestro I sat with business stakeholders to understand how they made decisions, advised where agentic AI could help, and turned that into a working LangGraph application with a FastAPI backend, containerized with Docker and deployed to AWS with CDK, versioned in GitLab with CI/CD.

To be open about gaps: my main language is Python, my JavaScript is limited to React, and I have not used Google Apps Script or Make yet. GitHub Actions is close to the GitLab CI/CD pipelines I already use, and I keep my own code on GitHub.

A brand-new team with the freedom to pick its own stack is rare, and with flaconi expanding into the UK, Spain and five more countries, the operational work that needs automating will only grow. I would like to help set the team's first standards.

I will be based in Berlin, hold an EU Blue Card and can start on 15 November 2026. My salary expectation is €70,000 gross per year. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
