Application for MLOps Engineer (m/f/d)

Dear Redcare Pharmacy team,

I am writing to apply for the MLOps Engineer position at Redcare Pharmacy. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, so I know what it takes to get a model from a notebook into a service other people rely on.

At Kniit, a start-up working for the German energy sector, I am the only developer of an AI knowledge-extraction system and report directly to the CTO. The Python services run in a Docker and Kubernetes stack on Azure. I evaluated the multi-agent LangGraph pipeline against a ground truth test set built from SAP data and raised precision and recall from 33% and 45% to 93% and 90%. I also built an MCP service and Expert Interface, a web app where domain experts approve changes.

Pipelines and infrastructure as code are where I started at Covestro. As an AI consulting intern I containerized an agentic application (Python, FastAPI, React) with Docker, deployed it to AWS with CDK and kept it in GitLab with CI/CD pipelines. My master's thesis was about measuring quality: I automated generation and retrieval evaluation of a RAG system with RAGAS and PytrecEval and defined its AWS infrastructure as code. Before that I trained and compared forecasting and prediction models on time-series data and put them in front of chemists in a Streamlit dashboard.

I want to be clear about the gaps. I have not used MLflow, Kubeflow, GitHub Actions or Jenkins in a job. My CI/CD experience is GitLab, and I have used Kubernetes as part of an application stack rather than running a shared cluster. Those are the tools I would pick up first, and the ideas behind them (versioning, validation, monitoring, automated tests) are what I already work with.

Redcare is building its MLOps practice and AI platform inside the Data & AI department, and the posting stresses reliable, secure production services over experiments. That is the kind of work I want to do next, close to the data scientists whose models need to run.

I am based in Cologne, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
