Application for Software Engineer – Generative AI & Machine Learning (m/f/d)

Dear Hiring Team,

I am writing to apply for the Software Engineer – Generative AI & Machine Learning position at Enrichment Technology Company. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic knowledge-extraction system for the German energy sector.

Your role is about making AI useful for specialists, and that is how I have worked so far. At Kniit I built multi-agent extraction with LangGraph for complex regulatory and technical documents and raised precision and recall from 33% and 45% to 93% and 90%. I also built a Model Context Protocol query service that exposes the knowledge graph through an API with millisecond-latency retrieval, and a deterministic extraction pipeline for a second high-volume source that removed a projected $200,000 LLM cost. At Covestro I designed RAG pipelines for my Master's thesis and evaluated them with RAGAS against ground truth provided by chemists.

Connecting AI to existing applications takes solid software engineering. At Kniit I built the Expert Interface, a React and Python microservices application on Azure in which domain experts approve changes to the knowledge graph. At Covestro I built a FastAPI backend and React front-end around an agentic workflow, tested the API with Postman and deployed it with Docker, AWS CDK and GitLab CI/CD. I work with Git daily and use Claude Code for development, and I review what it produces before it ships.

I have not run local, offline LLM deployments or operated an HPC cluster, and I would be learning that part on the job. What I bring to it is a habit of working with experts from other fields. At Covestro I sat with chemists and business stakeholders to understand how they decide before proposing an agentic approach, and at Kniit I worked with SAP specialists. Applying AI in a research and manufacturing environment with strict security and data-protection rules is the kind of work I want to do, and your AI computing centre makes it a place where I could grow quickly.

I am based in Aachen and hold an EU Blue Card. I can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
