Application for AI & Data Scientist (m/f/d) - Digital Solutions for Investment

Dear Hiring Team,

I am writing to apply for the AI & Data Scientist position in Digital Solutions for Investment at Allianz Investment Management. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic knowledge-extraction system, where I turned requirements from domain experts into working software.

Your posting asks for hands-on GenAI work with LLMs, RAG and agent frameworks. At Kniit I built multi-agent extraction pipelines in LangGraph on complex regulatory documents and raised precision and recall from 33% and 45% to 93% and 90%, measured against a ground truth derived from SAP systems. I also built a deterministic extraction pipeline for a high-volume source that replaced a projected $200,000 LLM budget with near-zero running cost. At Covestro I wrote my Master's thesis on evaluating RAG systems with RAGAS and benchmarked multilingual embedding models on over 1M chunks, so I am used to judging whether a GenAI solution is good enough to release.

The role combines development with stakeholder work. During my AI consulting internship at Covestro I talked to business users about their decision-making workflows, advised them on where agentic AI could help, and then built and deployed that application with FastAPI, React, Docker and AWS CDK. At Kniit I reported to the CTO and worked with domain experts, and I built the web interface through which they approve changes to the knowledge graph. I am comfortable presenting results and explaining trade-offs to non-technical colleagues.

On the platform side I have deployed containerized services on Azure and AWS, with Docker, Kubernetes at Kniit and CDK for infrastructure as code. I have not used Terraform in a job yet and would pick it up quickly. Governance is also new territory for me in a regulated setting, but my evaluation work gives me a practical base for documenting and testing AI systems, and I would like to learn the EU AI Act requirements on the job.

Allianz Investment Management caught my attention because it brings AI to the investment side of a global insurer, and the team is explicitly responsible for adoption through workshops and town halls as well as for code. I like that mix of building and enabling others.

I am based in Munich, hold an EU Blue Card, and can start on 15 November 2026. I speak English fluently and have German at B1 level. Thank you for considering my application. I would be glad to walk you through my work in an interview.

Kind regards,

Chandu Prasad Bhairapu
