Application for AI Developer

Dear Hiring Team,

I am writing to apply for the AI Developer position through Jobgether. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently LLM agents and retrieval systems that sit inside real business workflows.

At Kniit I was the sole developer of an agentic knowledge-extraction system for the German energy sector. I built multi-agent workflows in LangGraph, wrote the prompts, handled context and chunking, and indexed the results into a knowledge graph. Extraction precision and recall rose from 33% and 45% to 93% and 90%, measured against ground truth from the customer's SAP system. I also exposed the graph through an MCP query service and built a React and Python microservice interface on Azure so domain experts could review changes. That is the agent and integration side of the role.

RAG is where I have spent the most time. My Master's thesis at Covestro was the evaluation of RAG systems: I designed chunking strategies and vector database indexing, benchmarked multilingual embedding models on over one million chunks, and automated generation and retrieval evaluation with RAGAS. As an intern in the same team, I built an agentic application with LangGraph that routes between vector database queries, general inference and summarisation, with a React front end and a FastAPI backend, containerised with Docker and deployed to AWS with CDK and GitLab CI/CD.

I work mostly in Python with LangChain, LangGraph and Hugging Face, and I use Claude and other LLM APIs daily, including Claude Code in my development workflow. I like turning a business request into something people actually use, and I regularly explain technical choices to non-technical colleagues.

I am based in Germany, hold an EU Blue Card and can start from 15 November 2026. Remote work suits me well. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
