Application for GTM Engineer

Dear Hiring Team,

I am writing to apply for the GTM Engineer position at your partner company. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic pipeline and its internal tools, working directly with its users.

At Kniit, a startup in the German energy sector, I owned the whole pipeline: ingestion, extraction with LangGraph agents, indexing, and a Python service that exposes the results through an API. A multi-agent extraction setup took precision and recall from 33% and 45% to 93% and 90% against a ground truth I built from the SAP system, so I know how to evaluate an LLM workflow and not just ship it. For a second data stream I replaced the LLM step with plain code and brought a projected $200,000 LLM budget down to near zero. I check whether an AI step earns its place.

On the data science side, I built Random Forest, XGBoost and LSTM models at Covestro to predict synthesis outcomes from process data, including the feature engineering and validation against an empirical baseline. I used Python and SQL throughout, and I also built a Streamlit dashboard so chemists could try parameter changes and see predictions. The same approach carries over to propensity scoring on CRM and firmographic data. I have not worked with HubSpot or Clay. To close that gap I am building a small n8n project that takes requests by webhook and email, qualifies them with an LLM and pushes the result into a CRM through a REST API, with logging and an approval step.

You describe a role where one person builds the outbound engine and documents it so others can run it. That fits how I have worked so far: alone on the build, close to the users, and with clear handover documentation. A fully remote setup in Europe suits me well, and a company that has just closed a Series C round and wants to build this from scratch offers the ownership I look for.

I am based in Germany, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
