Application for AI Platform Engineer (m/w/d)

Dear Hiring Team,

I am writing to apply for the AI Platform Engineer position at mittwald. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently on Kubernetes and Docker with LiteLLM in front of the models.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I ran it on Kubernetes and Docker with LiteLLM, MongoDB and Postgres, and I built an MCP query service that answers in milliseconds and plugs into Claude Code. Choosing which model fits which task, and what it costs to run, was part of the daily work: a code-based extraction path replaced a projected $200,000 LLM budget with near-zero running cost.

My thesis at Covestro covered RAG systems end to end. I benchmarked multilingual embedding models on over one million chunks, compared answers and retrieval against ground truth from chemists, and fine-tuned models for retrieval. That gave me a practical view of where LLMs are strong and where they fail, and of how the Transformer architecture shapes both. I have also fine-tuned open-source LLMs with QLoRA.

On the deployment side I have shipped containerised stacks with Docker, AWS CDK and GitLab CI/CD, and I write the Python and FastAPI services around them. I know the GPU and vLLM layer less well from production work, so I would be learning that part of your stack on the job, and I am glad to do it.

Hosting open-source models on GPU clusters in Germany, and building the platform yourselves instead of buying it, is the kind of engineering I want to work on. The mix of Python, Go and Kubernetes under real customer workloads is what draws me to this role.

I am based in Bielefeld, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application. I would be glad to talk about how I could help build your AI hosting platform.

Kind regards,

Chandu Prasad Bhairapu
