Application for Consultant Data Science (m/w/d)

Dear Hiring Team,

I am writing to apply for the Consultant Data Science position at Open Logic Systems. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a knowledge-extraction system for the German energy sector.

Your role combines model development with advising customers, and I have done both. At Covestro I worked with chemists on a data science project: I built Random Forest, XGBoost and LSTM models in Python that predicted prepolymer synthesis outcomes from sensor time series, and a Streamlit dashboard let them test parameter changes before running a physical batch. In my AI consulting internship at Covestro I talked with business stakeholders about how they make decisions, advised on where agentic AI could help, and turned that into an application built with LangGraph, FastAPI and React.

At Kniit I owned the whole pipeline for extracting knowledge from regulatory documents, working directly with the CTO and SAP domain experts. I raised extraction precision and recall from 33%/45% to 93%/90% with a multi-agent LangGraph setup, and replaced an expensive LLM stage with deterministic code, which cut a projected $200,000 LLM budget to near-zero running cost. I work with SQL and Postgres, and I have deployed on AWS with CDK and on Azure with Docker and Kubernetes. I have not used Spark in a job yet, and I am building a PySpark pipeline project to close that gap.

MDM Booster, DeepView and DookuSense are the kind of applied AI products I like to work on, and the research projects with Fraunhofer make the role broader than pure customer delivery. Travel to customer sites is no problem for me. I am based in Münster, hold an EU Blue Card and can start on 15 November 2026.

Thank you for considering my application. I would be glad to talk about how I could contribute to your AI solutions.

Kind regards,

Chandu Prasad Bhairapu
