Application for Software Engineer

Dear Hiring Team,

I am writing to apply for the Software Engineer position at Owkin. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system that LLM agents query through tools.

At Kniit I built the whole knowledge-extraction pipeline for the German energy sector: multi-agent extraction in LangGraph, a deterministic pipeline for a second high-volume source, and an MCP query service that exposes the knowledge graph to agents with millisecond latency. I measured results against a ground truth derived from the customer's SAP system, which took precision and recall from 33% and 45% to 93% and 90%. That is the kind of evaluation work your role describes, and I worked on it with domain experts who were not engineers, much as K Pro's engineers work with biomedical scientists. I use Claude Code daily, including custom skills and agentic coding workflows.

On the engineering side, I wrote the Python microservices behind a React curation app on Azure and ran the stack with Docker and Kubernetes. At Covestro I deployed an agentic LangGraph application to AWS with CDK, Lambda and GitLab CI/CD. My thesis there was an automated evaluation of RAG systems with RAGAS and PytrecEval. I have not yet worked with Athena, Trino or Airflow, and I have not carried an on-call rotation at large scale. I would be glad to learn them on a product like yours.

Owkin's K Pro caught my attention because it puts an AI scientist in front of pharmaceutical researchers and has to stay trustworthy while doing it. Building agents on top of multimodal patient data, with evaluation as part of the product, is the work I want to do next.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
