Application for Specialist/Engineer AI/“Intent-Based Networking”

Dear Mr. Merz,

I am writing to apply for the Specialist/Engineer AI/“Intent-Based Networking” position at racksnet. I have a Master’s in Artificial Intelligence and three years of experience building and deploying AI applications, from time-series models to LLM-based agent systems, and I would like to put that into the AI layer of your network automation software.

You ask for experience with machine learning, deep learning and time-series data. At Covestro I built and compared Random Forest, XGBoost and LSTM models on sensor time-series, with lag features and rolling windows, and wrapped them in a Streamlit dashboard so chemists could test parameter changes. At Cognizant I developed ARIMA, SARIMA, Prophet and LSTM models for EV load forecasting. That is the same kind of work as spotting patterns and deviations in network telemetry.

The architecture and framework evaluation part is close to my last role. At Kniit I was the sole developer of an agentic knowledge-extraction pipeline, reporting to the CTO. I compared agentic, deterministic and monolithic strategies against a ground truth, which took precision and recall from 33%/45% to 93%/90%, and I replaced a projected $200,000 LLM cost with a code-based pipeline. I also built a Model Context Protocol service on top of a MongoDB and Neo4j backed knowledge graph, and a React and Python web app on Azure.

For the engineering side I work in Python with Docker and REST APIs (FastAPI), version them in Git and GitLab CI/CD, and deploy to AWS with CDK and to Azure. At Covestro I tested APIs with Postman and shipped a containerised agentic application to AWS. My front-end experience is in React; I have not worked with Vue.js or Node.js, and I would pick them up on the job.

Your software lets teams run multi-vendor networks, Cisco, HP and Dell, through one interface, and adding intent-based AI on top of that is a concrete step beyond the usual dashboard. I like that the role starts with architecture, a lab and proof-of-concepts with partners, because that is how I work: small experiment, measure, then build.

I am based in Frankfurt am Main, hold an EU Blue Card, am happy to travel, and can start on 15 November 2026. Thank you for considering my application. I would be glad to talk.

Kind regards,

Chandu Prasad Bhairapu
