### Application for R&D Scientist – Operational AI (f/m/d)

Dear Hiring Team,

I am writing to apply for the R&D Scientist – Operational AI position at Siemens Healthineers. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system built on LLMs, RAG and a knowledge graph.

At Kniit I built the whole knowledge-extraction pipeline for the German energy sector: LLM agents in LangGraph, a deterministic pipeline for a second high-volume source, and an MCP query service that serves the knowledge graph with millisecond latency. I measured every change against a ground truth derived from the customer's SAP system, which took precision and recall from 33% and 45% to 93% and 90%. I worked with domain experts who were not engineers, and I built the web app they use to approve changes.

Your posting also asks for machine learning on operational data and for what-if analysis. As a data science intern at Covestro I built Random Forest, XGBoost and LSTM models that predict the outcome of prepolymer synthesis from sensor time series, and a Streamlit dashboard where chemists change process parameters and see the predicted result before running a physical batch. At Cognizant I developed ARIMA, SARIMA, Prophet and LSTM models for EV load forecasting. My Master's thesis, also at Covestro, was an automated evaluation of RAG systems with RAGAS and PytrecEval on more than one million chunks. I have not built optimization or digital twin systems in production, and I do not have a publication record beyond one conference paper. I would like to grow in both.

For production work I write Python and FastAPI services, deploy on Azure with Docker and Kubernetes, and use Git with CI/CD. At Covestro I shipped an agentic LangGraph application to AWS with CDK and GitLab CI/CD, after working with business stakeholders on how their decision workflows could be supported.

Siemens Healthineers is building AI for hospitals and clinical decision-making, and the Operational AI role applies it to resource allocation and capacity planning, where better decisions have a direct effect on patients. Moving from prototypes to systems that business users depend on is the work I want to do next.

I am based in Erlangen, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

**Chandu Prasad Bhairapu**
