Application for AI Systems Engineer (m/f/d)

Dear Hiring Team,

I am writing to apply for the AI Systems Engineer position at welevel. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it as the Python and FastAPI backend behind LLM-driven systems.

At Covestro I built the backend of an agentic AI application with Python and FastAPI, tested the endpoints with Postman, containerized everything with Docker and deployed it to AWS with CDK, with GitLab CI/CD for the pipeline. At Kniit I was the sole developer of a knowledge-extraction system: microservices in Python, a Postgres and MongoDB data layer, and a query service that returns results in milliseconds. That is the same mix of API design, data storage and deployment your role describes.

Your team needs tools to simulate and debug prompt flows. I have spent most of the last two years on that problem. At Kniit I tuned multi-agent LangGraph pipelines against a ground truth until precision and recall went from 33% and 45% to 93% and 90%, and in my thesis I automated RAG evaluation with RAGAS. I also built a web app on Azure where domain experts review and approve changes, so I am used to shipping tools for non-engineers who depend on them.

Honestly, I have not worked on a game or in Unreal Engine 5 yet, and my PostgreSQL work has been part of larger AI systems rather than a database role of its own. I learn new stacks quickly and work well with domain experts, from SAP specialists at Kniit to chemists at Covestro, which is how I would approach gameplay and narrative teams.

welevel interests me because it is a young Munich studio, backed by BITKRAFT Ventures, that is building a AAA title and putting AI into the game itself instead of bolting it on. Making NPCs remember players is a backend problem I would like to work on.

I am based in Munich, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
