Application for Founding Engineer

Dear Hiring Team,

I am writing to apply for the Founding Engineer position at your startup in Bonn. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer on an agentic system at a startup, which is close to the ownership you describe.

At Kniit GmbH I own a knowledge-extraction pipeline end to end: ingestion, chunking, prompt engineering and indexing. I built the multi-agent part in LangGraph, with entity-extraction, relationship-analysis, consolidation and reflection agents running in parallel, and raised precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume data stream I wrote a deterministic pipeline instead, which cut a projected $200,000 LLM budget to near-zero running cost. I also built an MCP query service over the resulting knowledge graph and plugged it into Claude Code.

The same project covers the full stack. I built the Expert Interface, a React frontend on Python microservices running on Azure, so that domain experts can approve changes to the knowledge graph. At Covestro I designed and deployed an agentic LangGraph application with a FastAPI backend and React frontend, containerised with Docker and deployed to AWS with CDK and GitLab CI/CD. Day to day I work with Claude Code and custom skills, which is how I keep the path from idea to a running prototype short.

Building agentic software for local businesses with a team of three or four people is the kind of work I want: small, close to the customer and with real architectural decisions to make.

I am based in Bonn, hold an EU Blue Card and can start on 15 November 2026. I am happy to work in person from the Bonn hacker house. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
