Application for Forward Deployed AI Engineer

Dear Hiring Team,

I am writing to apply for the Forward Deployed AI Engineer position at Proxify. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly agentic systems and RAG pipelines that had to work inside a customer's own environment.

At Kniit I was the sole developer of a knowledge-extraction system for the German energy sector. I worked with SAP domain experts to understand the documents and the ground truth, then built the multi-agent LangGraph pipeline and measured it: precision and recall went from 33%/45% to 93%/90%. For a second, high-volume source I replaced the LLM calls with deterministic code, which removed a projected $200,000 LLM budget. I also built an MCP query service and a React and Python curation app on Azure, so I know what it takes to get from a brief to something people use.

At Covestro I worked as an AI consulting intern with business stakeholders on their decision-making workflows and deployed an agentic LangGraph application with FastAPI, React, Docker and AWS CDK. In my Master's thesis I evaluated RAG pipelines with RAGAS and benchmarked multilingual embedding models on over one million chunks. Fine-tuning is familiar to me too, from QLoRA work on an open-source LLM.

Your posting says the technical call is the engineer's and that the work starts from the client's problem, not from a product. That matches how I have worked with domain experts so far. I should be open about two things: I have three years of experience, not five, and my production work with vLLM and multi-tenant RAG is limited. I would take the first on with hands-on delivery and the second by building on the stack I already use.

I am based in Berlin, available from 15 November 2026 and hold an EU Blue Card. I am happy to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
