ABOUT ME

Master's graduate in Artificial Intelligence with 3 years of professional experience in AI engineering and software development. Specialized in multi-agent systems for document understanding, from extraction, reasoning and evaluation stages to knowledge-graph memory. Most recently sole developer of an agentic knowledge-extraction system for the German energy sector at an early-stage startup, backed by full-stack React and Python delivery and RAG evaluation at Covestro.

EXPERIENCE

Associate Generative AI Developer - Agentic Indexing Pipeline Engineer for German Energy Sector

Kniit GmbH

November 2025 – present Muldestausee, Germany

- Designed and optimized a multi-agent harness (LangGraph: entity-extraction, relationship-analysis, consolidation and reflection agents running in parallel) for knowledge extraction from complex regulatory and technical documents, measured against an SAP-system-derived ground truth; precision/recall raised from 33%/45% to 93%/90%.
- Sole developer owning the full knowledge-extraction pipeline end-to-end: data ingestion, chunking, prompt engineering and indexing (agentic, deterministic and monolithic strategies), reporting directly to the CTO and collaborating with SAP domain experts across the German energy sector.
- Engineered a deterministic (code-based) extraction pipeline for a second, high-volume source stream, cutting a $200,000 projected LLM budget to near-zero recurring cost while pushing extraction accuracy toward 100%.
- Designed and implemented a Model Context Protocol (MCP) query service exposing the knowledge graph for millisecond-latency retrieval, integrated directly into Claude Code for agentic development workflows.
- Developed Expert Interface, a graph curation web app (React frontend, Python microservices backend) deployed on Azure, letting domain experts validate and approve knowledge-graph changes.
- Used Claude Code, custom skills and agentic coding workflows to prototype fast and ship reliable code grounded in clean code principles.
- **Tech stack: Python, LangGraph, LangChain, LiteLLM, GraphRAG, RAG, Vector Search, MCP, Neo4j, Postgres, MongoDB, React, FastAPI, Docker, Kubernetes, Azure**

GenAI Developer (AI Consulting Intern) - Development and Deployment of an Agentic AI Workflow

Covestro Deutschland AG

December 2024 – April 2025 Leverkusen, Germany

- Worked with business stakeholders to understand their decision-making workflows, then designed and deployed an agentic LangGraph application that routes each request into the right pipeline: vector database queries, general inference or summarization.
- Developed a React frontend and a Python backend with FastAPI, using Postman for API testing.
- Built and containerized the entire stack with Docker and deployed it to AWS using CDK, following clean code practices; version-controlled in GitLab with CI/CD.
- **Tech stack: Python, LangGraph, LangChain, React, FastAPI, Postman, Docker, AWS (CDK, EC2, Lambda), GitLab CI/CD**

GenAI Developer (Master's Thesis) - Evaluating the Performance of RAG Systems

Covestro Deutschland AG

May 2024 – November 2024 Leverkusen, Germany

- Automated evaluation of RAG generation and retrieval with RAGAS and PytrecEval, comparing model answers to chemist-provided ground truth.
- Built AWS cloud infrastructure with Lambda, SQS and DynamoDB for PrismaChat RAG evaluation using CDK.
- Benchmarked multilingual embedding models on over 1M chunks of Covestro's internal chemical data.
- Designed RAG pipelines: chunking strategies, vector databases, indexing and retrieval fine-tuning.

- **Tech stack: Python, RAGAS, PytrecEval, LangChain, Hugging Face Transformers, PyTorch, Vector Databases, Azure AI Search, AWS (Lambda, SQS, DynamoDB, CDK), Docker, Streamlit**

Data Scientist (Intern) – ML-Based Prediction of Prepolymer Synthesis Outcomes

Covestro Deutschland AG

November 2023 – April 2024 | Leverkusen, Germany

- Built and compared Random Forest, XGBoost and LSTM models to predict prepolymer synthesis outcomes (e.g. viscosity, reaction progression) from time-series process data, evaluating tree-based vs. deep learning approaches for this tabular/temporal hybrid problem.
- Engineered lag features and rolling statistical windows from raw sensor time-series (temperature, reaction time, process variables) for the tree-based models, while feeding raw sequences directly into the LSTM.
- Benchmarked model performance against traditional empirical curve-fitting methods, improving early identification of batches likely to deviate from target specification.
- Deployed an interactive Streamlit dashboard exposing model predictions to chemists in real time, letting them simulate parameter changes and see predicted outcomes before running physical batches.
- **Tech stack: Python, Scikit-Learn, XGBoost, TensorFlow/Keras, Pandas, NumPy, SciPy, Matplotlib, Streamlit**

Machine Learning Engineer - Electrical Vehicle Load Forecasting using Time Series Analysis

Cognizant Technology Solutions

September 2021 – March 2022 | Hyderabad, India

- Developed ARIMA, SARIMA, XGBoost regressor, FB Prophet and LSTM models for time series analysis of EV load.
- Developed an LSTM that achieved 96% test accuracy with strong performance on unseen data.
- **Tech stack: Python, Scikit-Learn, TensorFlow**

PROJECTS

Project: Order Inbox Agent | Python | TypeScript | Postgres | pgvector | LLMs
- Document agent that extracts purchase orders from emails, PDFs and Excel files, matches each line to a product catalog (fuzzy and pgvector embeddings) and writes it to a mock ERP via REST; TypeScript review screen for low-confidence lines and a labelled test set in CI for reliability.

Project: Spec-Driven Coding Agent Harness | Claude Code | MCP | LangFuse | GitHub Actions
- Agent harness that turns a feature request into pytest acceptance tests and lets Claude Code implement it under rules, skills and hooks with MCP-supplied context; CI gates each change with tests and an agent evaluation suite (pass rate, cost, turns), traced in LangFuse.

TECHNICAL SKILLSET

- **AI Engineering:** multi-agent systems (LangGraph, LangChain), LLM APIs (LiteLLM), document extraction, RAG, GraphRAG, embeddings, vector search, MCP, prompt engineering, QLoRA fine-tuning; evaluation (ground truth, RAGAS, PytrecEval)
- **Full-Stack:** Python, FastAPI, Python microservices, React (beginner), REST APIs, Postman, Claude Code (custom skills, agentic coding), Agile
- **Data & Cloud:** Postgres, SQL, Neo4j, MongoDB, vector databases (Qdrant, Pinecone, Azure AI Search), Azure, AWS (Lambda, SQS, DynamoDB, EC2, S3, CDK), Docker, Kubernetes, Git, GitLab CI/CD
- **Languages:** English (Business Fluent), German (B1), Hindi (Fluent), Telugu (Native)

EDUCATION

Master of Science in Artificial Intelligence — March 2022 – April 2025
Technische Hochschule Würzburg-Schweinfurt, Würzburg, Germany

Bachelor of Technology in Mechanical Engineering (Minor in CSE) — August 2017 – July 2021
G Pulla Reddy Engineering College, Kurnool, India
