Application for Full-Stack Engineer, Operations Engineering Team

Dear Hiring Team,

I am writing to apply for the Full-Stack Engineer position in the Operations Engineering team at iwoca. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a Python system with a React web app that domain experts use to review its output.

That web app is the closest match to your team's work. At Kniit I built Expert Interface, a graph curation tool with a React frontend and Python microservices on Azure, so that SAP domain experts could validate and approve changes to a knowledge graph. I sat with those experts, took their problem to delivery and changed the tool as they used it. Behind it I owned the whole Python pipeline, which raised precision and recall from 33

On the backend side I have written Python services with FastAPI and worked with Postgres, including in the Kniit stack. At Covestro I built a React frontend and a FastAPI backend, containerised it with Docker and deployed it to AWS with CDK, with GitLab CI/CD. During my consulting internship there I learned to turn business stakeholders' workflows into a technical approach. I use Claude Code every day, with custom skills and agentic workflows, for boilerplate and research, so I can spend my time on design and trade-offs.

I have not used TypeScript or Django in a job yet. My React experience is project-sized rather than years deep, and Python is where I am strongest. I would close those gaps quickly.

iwoca's German operations team relies on in-house tools for underwriting, notifications and collections, and the team is now reworking how that work gets done. That is the kind of engineering where people see the result in daily use, which is what I want from my next role.

I am based in Berlin, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
