Application for Data Scientist (m/f/d, E13 TV-L, 100%)

Dear Hiring Team,

I am writing to apply for the Data Scientist position in the Research Data Management Unit of the HUMAN ORIGINS Cluster of Excellence. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I enjoy turning a domain expert's question into working software.

At Covestro I worked as a Data Scientist (Intern) with chemists, predicting viscosity and reaction progression of prepolymer synthesis from sensor time series. I compared Random Forest, XGBoost and an LSTM against the existing curve-fitting method and built a Streamlit dashboard so the chemists could change parameters and see the predicted outcome before running a batch. That is close to what you describe: methods that start from the research question, with an interface the researchers actually use.

At Kniit I am the sole developer of a knowledge-extraction system for the German energy sector. LangGraph agents extract entities and relationships from regulatory documents, and precision and recall rose from 33% and 45% to 93% and 90% against a ground truth derived from SAP data. I also built a React and Python web app on Azure where domain experts review and approve changes to the knowledge graph. In my thesis at Covestro I evaluated RAG systems with RAGAS and PytrecEval, so evaluating AI against expert-provided ground truth is familiar territory.

On research software practice, I work with Git, GitLab CI/CD, Docker and FastAPI, and I have deployed stacks to AWS with CDK. I have not worked with ancient genomics or archaeological data. I would learn the domains from the researchers, and the pipeline side is where I can contribute from the first day.

The mix of PIs from science, archaeology and the humanities, supported by a unit that treats research data and research software as infrastructure, is what draws me to this role. A position that sits between QBiC and the Digital Humanities Center, and has to serve very different data types, is the kind of work I want to do.

I am based in Stuttgart, hold an EU Blue Card and can start on 1 January 2027 as planned. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
